Determining Your Best Relabeling Option

“If you’re thinking of relabeling your warehouse racks, there are several potential solutions we typically recommend you consider,” said John Roggeveen, an ID Label business development manager. “Based on our experience with thousands of warehousing clients, the best option really depends on your specific needs and environment.”

Here are four proven solutions to consider for your specific project.

1. **Beam Cover-Up Strip with Easy-Release Top Coating**

Are your beams scratched, rusted or dingy? Are your existing barcode labels damaged, missing or peeling? Would you like to avoid the laborious task of scraping off old barcode labels before relabeling?

If any of these apply, then a base cover-up strip with an easy-release top lamination may be an ideal solution.

“Our Beam Renew™ product features a durable construction and advanced adhesive that makes it easy to apply directly over old warehouse beams and barcode labels without the time and expense of cleaning, scraping or painting,”

Roggeveen said, "We typically manufacture it in a color to match your existing racking, so it really makes your beams look like they’ve been newly restored.”

Beam Renew also features an easy-release top coating that makes it a breeze to apply and remove individual barcode location labels to accommodate frequent product inventory and information changes for years to come.

2. Magnetic Warehouse Location Labels

"Magnetic location labels are another popular choice," Roggeveen said, "especially for warehouse facilities that reconfigure their rack locations or inventory with regularity. They’re also a good choice for cold-storage environments."

Magnetic labels are easy to move and they keep your warehouse racks looking neat, orderly and clean. They can be manufactured in a wide variety of colors and sizes for use on horizontal beams or as vertical totem labels. On the other hand, magnetic labels can occasionally be knocked askew or to the ground – or can even accidentally adhere to metal lift trucks – during the picking and placement of pallets and cases.

"Magnetic labels are typically more expensive to manufacture than other barcode labeling options," Roggeveen noted, "but they have a long useful life that offers a good return on investment.”

3. Removable Warehouse Labels

If your beams are in good shape, consider using a preprinted, removable barcode label. Like the other options above, a removable label makes it easy to relabel rack locations. They are simple to install and offer location flexibility, without any need for scraping or cleaning to remove them.

"Our Clean Release™ removable label features an advanced adhesive that adheres tightly to virtually any surface, but is easily removable without a hint of adhesive residue left behind,” Roggeveen said. “It was designed with today’s modern warehouse in mind, where speed, efficiency and inventory location flexibility are top priorities.”

As with other label options, Clean Release labels can be manufactured in a variety of sizes and materials with multicolor designs.

4. Laminated Barcode Labels with Extreme Durability

Are your current rack labels easily damaged by daily encounters with lift trucks and warehouse traffic? Will your labels be exposed to direct sunlight or heat, or come in contact with harsh cleaning solutions or chemicals? Perhaps you’d simply like to move from low-quality, print-your-own labels to a longer-lasting, more durable solution.

"Label durability is probably the most important requirement our customers have,” Roggeveen said. "It’s imperative that barcode location labels scan accurately each and every time. Errors can lead to manufacturing issues, shipping mistakes, product returns and other costly mistakes.”

One of the best solutions for quality and durability is a BullsEye™ label. “They are custom-engineered with UV-resistant inks and a specialized laminate coating for extreme durability and longevity, while providing accurate scans 100% of the time,” Roggeveen said. “Aggressive adhesives allow these rigid labels to be applied directly to surfaces without requiring a placard or label holder, so they are easy and cost-effective to install.”

Helping You Understand Your Options

"When it comes to barcode labeling, there is no one-size-fits-all answer,” Roggeveen concluded. “So consult with ID Label to understand your options.”

ID Label’s barcoding solutions have been tested and used in operations around the globe for more than 20 years – extensive experience and knowledge we can bring to your specific requirements. Any of the label options described above can be installed using ID Label’s national installation services. Each year we install more than one million warehouse labels and 50,000 signs.
